

Trilliant Networks & Devices

Trilliant Network Solutions are the foundation of your smart grid. They provide the exact communications technology needed to ensure reliable, secure connections between utility applications and the devices that send data to those applications.

- **Trilliant SecureMesh® Wide Area Network (WAN)**
Real-time communications with large numbers of devices across a large geographic area
- **Trilliant SecureMesh® Neighborhood Area Network (NAN)**
When device signals need rapid but not necessarily real-time processing
- **Trilliant SecureReach® Low Power Wide Area Networks (LPWANs)**
Well suited for targeted/opt-in deployments with applications that can tolerate longer latency
- Integration with cellular networks. When you need to tie-in cellular devices without adding network infrastructure

Trilliant end-point devices include cell readers and communications hub facilities that connect through cellular networks. Our connectors offer broadband wireless connectivity. And our street light controller modules enable smart outdoor lighting systems.

Trilliant UnitySuite®

To maximize the value of your network data to all parts of your organization, Trilliant offers powerful UnitySuite software.

Our UnitySuite head-end system collects, processes, and moves data between the network and the applications in use. The business intelligence software in UnitySuite helps make sense of large data sets that flow from your connected devices. It gives you a single pane of glass viewpoint of your operating systems, and helps you make quicker business decisions.

Industrial Internet of Things

Data is a major resource for resolving today's environmental, economic, and climatic problems. To better manage that data, cities and utilities are moving to an Industrial Internet of Things (IIoT) strategy.

Trilliant network solutions offer a range of benefits, including security compliance with all industry standards. Our solutions integrate well with existing city or utility networks, and with all devices that have an IP address.

DISCOVER THE *Power Of Choice*

IIoT links all your data-producing devices together. It lets you integrate increasing amounts of data into your analyses. And the more comprehensive your analyses, the more likely you are to arrive at decisions that make sense for your business.

Trilliant can help you prepare for the increasingly complex IIoT future with:

- Robust network solutions that accommodate all the devices you will need to connect, regardless of brand
- Communications protocols that partition applications. You ensure data integrity and privacy as your systems expand
- Lighting and metering solutions that accommodate growing populations

Trilliant solutions grow with you and support changing requirements. With our flexibility and customer focus, you underpin the decisions you make today with the foundation you need for the future.
